

X•Layer Technology

Beyond ALPR ► X•Layer

**X•Layer – an additional layer to traditional LPR technology.
Collect more (invisible) fact data points in real time.**

In addition to ALPR software which recognizes and processes characters. X•Layer Privacy-By-Design data point collection of moving vehicles offers you an additional layer of valuable information about traffic participation, road safety and more.

- Multiply the information you collect on highways
- Get more data points while recognizing License Plates
- Identify the wireless devices as part of and within the vehicles
- Correlate Privacy-By-Design the collected data points in real-time
- Prevent accidents and incidents in addition to using ALPR cameras

Next-Level Privacy-By-Design Fact Data Points Collection

X•Layer – an additional layer to traditional LPR technology. Collect valuable (invisible) multi-layer verifiable information while LPR + Speed Cameras capture and process license plates in the same time frame.

Everything around us constantly transmits identifiers and attributes into the Air. X•Layer by X•Sensor collects these identifiers and attributes privacy compliant and in real-time as vehicles drive by.

X•Layer: A next-generation safety technology that complements traditional ALPR. X•Layer passively and constantly sniffs the radio frequency spectrum, collecting invisible identifiers and attributes that are constantly transmitted by any type of device equipped with wireless transmission components.

Related to the vehicle: infotainment system, e-calling, navigation, GPS, tire pressure, fleet management, smart key, etc. Related to in-vehicle: smartphones, headsets, earpods, smart watches, smart wearables, and so on.
